

METHOD, SYSTEM, AND PROGRAM FOR TRANSMITTING
FACSIMILES IN A NETWORK ENVIRONMENT WHERE MULTIPLE FAX
SERVERS USE A COMMON RENDERING MACHINE

ABSTRACT

- 5 Disclosed is a system, method, and program for processing a message in a network computing system including a facsimile transmission comprised of a recipient contact address and message content. The message content includes at least one of message text and attached files. Multiple facsimile transmissions are managed as fax jobs in multiple fax management systems. The fax management systems
- 10 transfer the message content from the fax jobs to a rendering computer. The rendering computer launches at least one application program to convert the message content from the multiple fax jobs to images in a file format and transfers each converted message content in the file format to the fax management system that sent the message content to the rendering computing system. The fax management
- 15 systems transfer the message content in the file format to one of multiple communication ports for transmittal to the recipient contact address.
